

Burlington Installation Corporation

BIC

The new BIC front fenders were developed by Coneqtec Corporation specifically for the Case 580L, 580SL and 590SL 4WD backhoes as well as the 570 LXT and all Case forklifts.

The addition of fenders will minimize damage to windshields, machines, machine operators and oncoming traffic due to flying mud and debris.

The rugged, easy to install design makes these fenders a "must have" on municipal, rental and owner-operator tractors where frequent "roading" is performed.

Kingpin mounting allows fenders to turn with the wheels. The unique "split-bracket" design allows easy 4-bolt removal and makes the upper fender assembly common for all models.

FRONT FENDERS

PART NO.	TRACTOR
FF580	580L/SL, 570LXT, 580 FL Field Installed
FF590	590SL - Field Installed
FI580	580L/SL, 570LXT, 580 FL Factory Installed
